# Outdoor 1200 Pizza pack

## Outdoor 1200 Pizza Pack components

- 1x steel pizza grill
- 1x pizza stone
- 1x firebrick
- 1x hardwood pizza paddle
- 1x stainless steel pizza peel with aluminium handle (assembly required)
- 1x stainless steel pizza cutter

To use the Outdoor 1200 pizza frame you will also require the following items which are included with the Outdoor 1200 Braai:

- 1200 cast iron cooking plate
- 1200 stainless steel ember maker
- 1200 fire mitts

## Using the 1200 Pizza pack

Prior to placing the pizza grill into the fire, insert the firebrick into the cradle under the frame. This helps regulate the temperature during cooking.

Once the fire has burnt down to a good bed of embers, the pizza grill (with the pizza stone) can be lifted into the fire. The pizza frame needs to be seated correctly in the firebox before use. Ensure you place the frame so the two top return folds of the frame locate onto the second rungs of the ember maker/side rack as shown above. This will give you adequate clearance to continue to rake embers across under the frame for cooking.

- Slide the cast iron cooking plate on top of the pizza grill.
- Pre-heat the pizza grill, stone and cast iron plate for several minutes before cooking on it. A good ember bed and allowing all components to heat up prior to cooking is essential.

We recommend not to overload the ingredients on your pizza and find that thin bases are best. Rotating the pizza throughout the cooking process will give you the best results. Total cooking time is approximately 4-5 minutes.

Once you've finished cooking, you can remove the pizza pack and ember maker to load the fire up with wood and relax in the warmth. Please ensure you take care when removing all hot parts from the fire and place onto a non combustible surface well out of harms way.

## Pizza peel assembly instructions

Your Outdoor 1200 Pizza Pack comes complete with a stainless steel pizza peel. The aluminium handle is packed separately to the peel head.

The pizza peel includes: 1x stainless steel peel, 1x aluminium handle, 2x M6x12mm stainless steel dome head sockets, 2x 6mm flat washers. (4mm hex key required for assembly - not included)

You will notice the handle end has an angle cut that matches the angled profile of the pizza peel end. Fit the stainless-steel end to the aluminium handle ensuring the angled end of the handle aligns to suit the pizza peel fold form. Line up the holes and use the 2x M6x12mm stainless dome head socket screws with 1 washer under each bolt head. Insert bolts and tighten.
